ABPortfolio: Identity and concept

My name is ABIJURU Cynthia.

Student	ABIJURU Cynthia
Registration / verification	25/27096 / MOB-A2-7096
App / platform	ABPortfolio / standalone Android APK
Audience	Recruiters, internship coordinators and professional opportunity reviewers

Purpose

Introduce a Software Engineering student through an offline portfolio with a concise biography, skills, education and two distinct project details. Editable profile fields and the profile image reference are saved locally.

Personal content

Education: Software Engineering at INES-Ruhengeri, 2024-2027 (expected completion). Milk Check API presents the student-supplied Member 4 (A4) API contribution. ABPortfolio is the implemented portfolio project; AI assistance is disclosed.

Visual direction

Navy identity panel, blue actions, white cards and a light slate background. The initials avatar AC represents ABIJURU Cynthia. Prioritize identity, readable content and clear feedback.

Default profile photo: the student-supplied portrait is bundled for offline display. Gallery or camera can replace it. Remove photo shows AC initials; resetting the saved profile restores the portrait.

2. User flow and information architecture

Launch	Read AsyncStorage. Show loading state, restore validated profile, or use defaults with recovery feedback.
Home	Identity sentence first, image/avatar, headline, biography, verification code, primary skill and availability.
Skills	Five technical skills and education period.
Projects	ABPortfolio and Milk Check API cards open Project Details in the parent stack. Android Back returns to Projects.
Edit	Controlled headline, biography, primary skill and availability. Validate before save; update the visible saved profile only after storage succeeds.
Media	Request permission, capture or select, preview, replace or remove. Explain denial and cancellation. Preserve unsaved text edits during photo changes.
Reset	Confirm before deleting the saved profile and restoring defaults.
About	App name, student identity, registration number, code, version, package and data-use statement.

Navigation and persistence

Bottom tabs: Home | Skills | Projects | Edit | About. Stack: Tabs to Project Details. On restart, restore saved profile fields and the image URI. Core portfolio screens use bundled content and local storage, so they do not require a connection.

3. Annotated wireframes: portfolio

HOME
My name is ABIJURU Cynthia.
[AC avatar / selected profile image]
Professional headline
Biography: Software Engineering; Milk Check API work
MOB-A2-7096
At a glance: skills, two projects, offline access
Career focus, saved primary skill, availability
Bottom tabs: Home | Skills | Projects | Edit | About

SKILLS & EDUCATION
Skills: Python, FastAPI, Pydantic, React Native, Logistic Regression
Education: Software Engineering
INES-Ruhengeri - Final year
2024-2027 (expected completion)
Technical interests: mobile apps, APIs and practical software

Annotations

The exact identity sentence is the first Home content sentence. The image can be replaced with a photo selected by the student. Skill chips wrap across lines; education remains a concise timeline. Both screens scroll to keep content reachable on narrow devices.

Projects overview

Two distinct cards: ABPortfolio - Offline Personal Portfolio, and Milk Check API. Each opens a separate detail screen showing a title, problem, personal contribution and technologies. No placeholder project is presented as completed work.

4. Annotated wireframes: details and editing

PROJECT DETAILS
[Back] Project Details
Milk Check API
Problem: milk delivery management and risk assessment
Contribution: Member 4/A4; health, summary, risk and delivery endpoints; Pydantic validation; model integration; mobile integration
Technologies: Python, FastAPI, Pydantic, Logistic Regression, React Native

PROFILE EDITOR
Image preview / initials avatar
Choose from gallery | Take a photo | Remove photo
Headline field: minimum 5 characters
Biography field: minimum 20 characters
Primary skill field: minimum 2 characters
Availability switch
Field-level errors / save feedback
Validate and save profile
Reset fields / confirmed reset of saved profile

Visible states

Invalid save shows messages by each invalid field and blocks saving. Successful save confirms local persistence. Storage failures leave the saved profile unchanged. Permission denial and cancellation give recovery feedback. No image shows the initials avatar. Reset requires confirmation.

Content provenance

Milk Check details and education dates were supplied by the student. ABPortfolio describes the actual app and acknowledges AI assistance. Physical-device testing and demonstration evidence remain separate tasks; this PDF does not claim those tests passed.

5. Visual and accessibility decisions

Color	Navy #172554 for identity and headings; blue #2563EB for actions; white cards on #F8FAFC. Light text on the navy hero improves contrast.
Typography	System sans-serif; bold hierarchy; readable body text and line spacing. Allow system font scaling.
Layout	Flexbox, scrollable screens, wrapping skill chips and consistent spacing. Validate on a narrow phone with increased system text size.
Controls	Buttons have button roles and at least 46-point minimum height. Inputs and availability switch have accessible labels.
Feedback	Field-level validation and text messages accompany color feedback. Notices use a polite accessibility live region.
Media / privacy	Use camera/gallery only for a profile image. No microphone permission is requested. Editable low-risk profile information and image references remain local.
Offline	Home, Skills, Projects, Edit and About do not need the network. Expo build/download and GitHub publishing require connectivity.

Verification required on the installed APK

Check narrow-screen and large-text layouts, Android Back, all three validation rules, saved-state restoration, reset, camera/gallery denial and cancellation, image removal, and Airplane Mode. Record actual results in the test log.

Implementation agreement

These wireframes describe the completed source layout. Capture final screenshots from the installed APK if adding a sixth comparison page. Do not substitute Expo Go screenshots for standalone release evidence.
